

WHAT SEPARATES RT ENGINEERING FROM OTHER SERVICE PROVIDERS?

Experience:

Team of service engineers
since 1972

Low Cost:

20%-40% below factory rates

Factory Training:

On most leading drives,
PLC's and HMI's

24/7 Response:

Only a phone call away

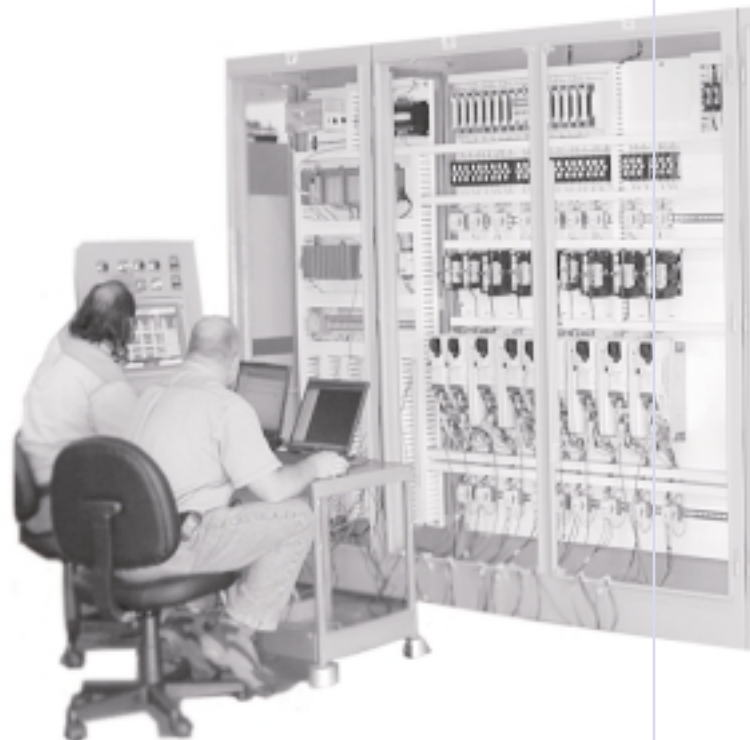

24 HOUR FIELD SERVICE

You may suffer from emergency breakdowns or intermittent problems with your drives and other electrical controls. When this happens, you can count on us 24 hours a day, seven days a week. We have experience with numerous industrial applications, including web handling, wire & cable, and linear & rotary motion.

So the next time your drives start driving you nuts, call us at (800) 343-1182.

START-UP SERVICE

Why take chances with your new engineered control system? RT Engineering's team of field service engineers will help you start-up your new control system after it's installed at your site. We'll work with your engineering, production and maintenance personnel to ensure a smooth, safe and successful start-up.

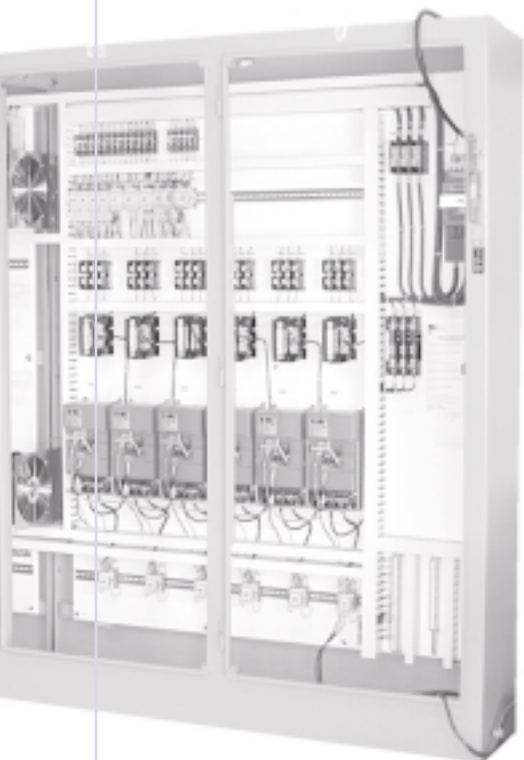

PREVENTIVE MAINTENANCE

RT Engineering offers thorough preventive maintenance service programs tailored to fit your shutdown schedule, your control products and your applications. Our experienced engineers can evaluate your control products, make improvements, detect early problems, and recommend solutions. Our preventive maintenance programs will help maximize your investment and maximize your uptime.

TRAINING

We offer a detailed, hands-on training program, ideal for your maintenance, operator, and engineering personnel. Our training programs will review controls programming, maintenance, diagnostics and repair. RT Engineering can train your staff at our facility or on-site at your production facilities. And we provide training materials and equipment to optimize the learning experience.

SPARE PARTS

RT Engineering stocks a broad selection of industrial electrical controls and important accessories. These parts are always available to meet emergency and normal customer needs. Our service engineers can assist you with selecting the appropriate items for your specific control requirements.

Key Partners

SCHEMATIC AND PROGRAMMING DOCUMENTATION

Ever wonder what might happen if your control panel, touchscreen or PLC goes down and you're stuck without accurate prints or a backup program? Especially after years of panel, touchscreen and PLC changes—changes that were never documented?

Our service and application engineers can help you avoid this costly downtime disaster by updating your old prints to reflect your most current system configuration. And we can download your installed programs to create vital backups.

MAXIMIZE YOUR INVESTMENT

Your engineered control systems cost you a lot of money. By relying on RT Engineering's experienced team of service engineers, you can help ensure that your important capital investments deliver the financial returns that you planned for.

MINIMIZE YOUR DOWNTIME

Keep your drives and other control products from driving you nuts. RT Engineering's 24 hour field service professionals will help you maximize your uptime.
